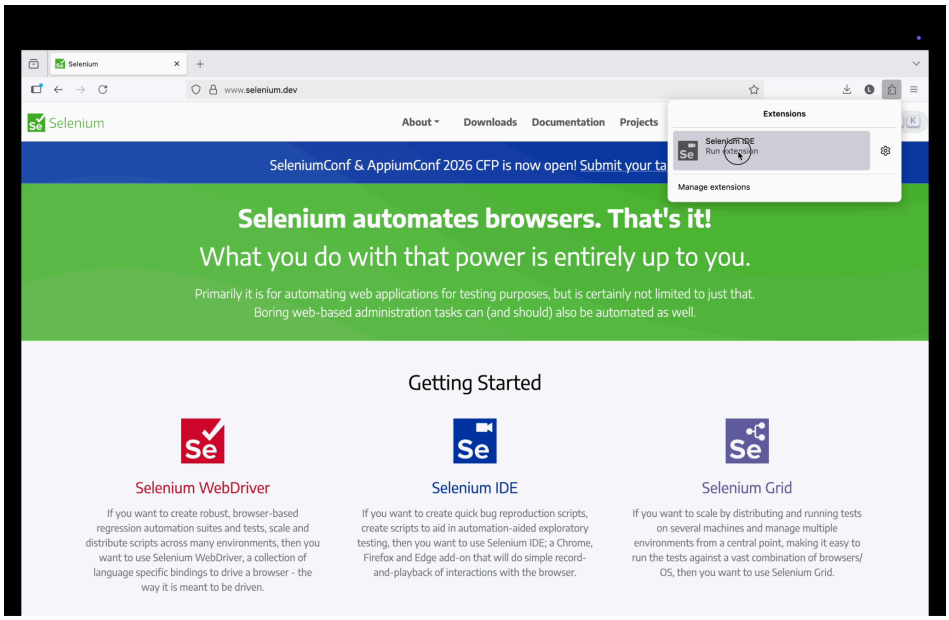
Lab-2 Selenium

Name - Lavya Sri Bonagiri
SJSU ID - 017552834

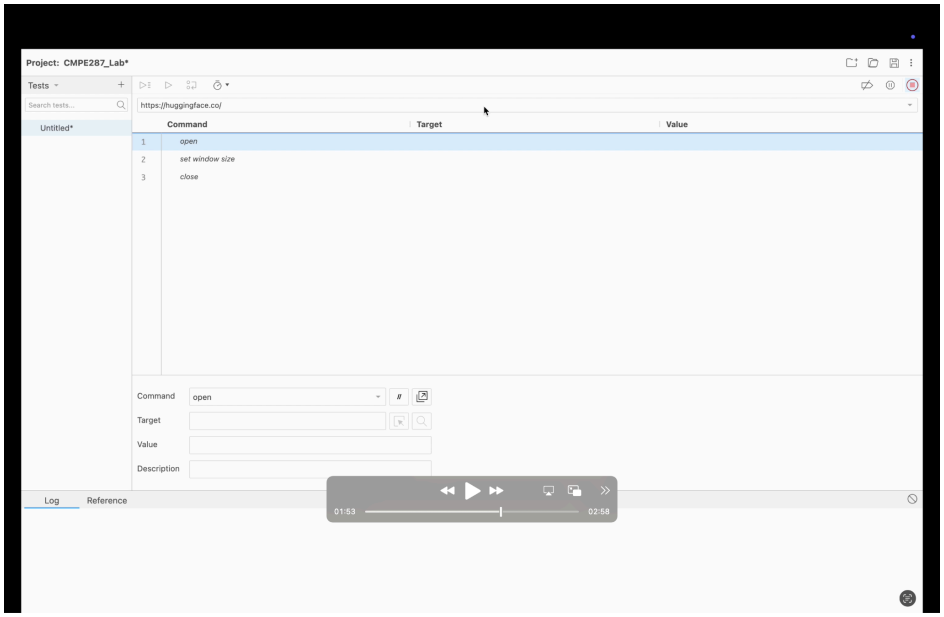
Steps:

1) Setup

- Installed **Selenium IDE** in **Firefox** and opened it from the Extensions menu.
- Created project **`CMPE287_Lab`** and a new test.

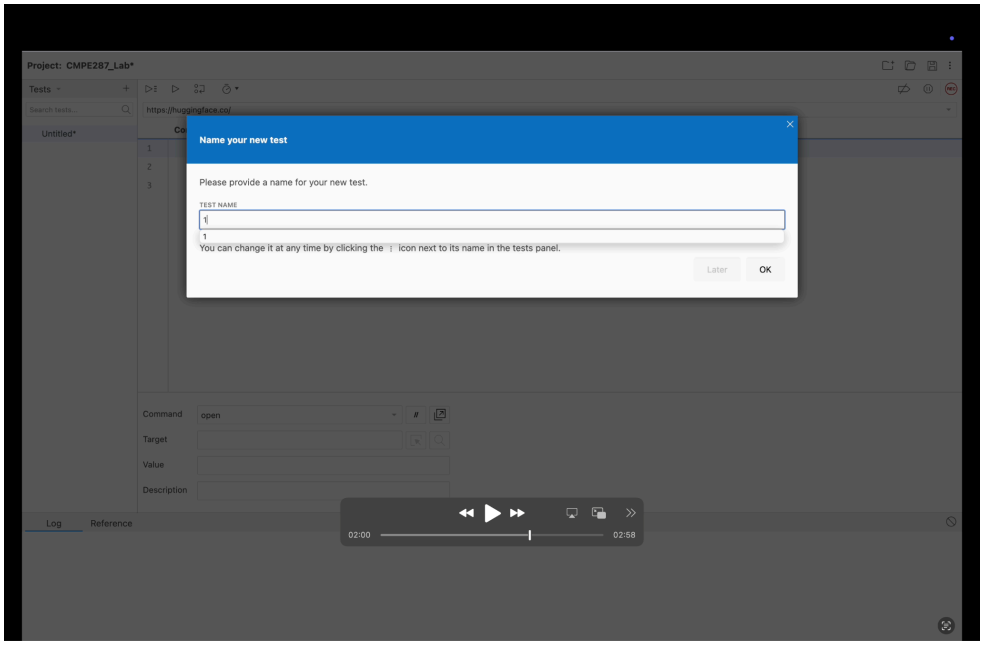


2) Tutorial followed



Lab-2 Selenium

Name - Lavya Sri Bonagiri
SJSU ID - 017552834



Followed the similar process and created the tests where all the commands were passed.
CMPE-287_Lab2_Videos_Lavya_017552834

3) Scenario under test

Title: Open Hugging Face → navigate to model page → verify page header loads

Steps (recorded):

1. Open base URL `https://huggingface.co/`.
2. Click **Search** (or navigate to **Models**) and open **DeepSeek** model page.
3. Verify an identifying element is present (e.g., the page header or model title).

Assertion:

- The page shows expected text **"DeepSeek"** (or an equivalent stable selector) in the model header.

  Note: During the first recording, the IDE inserted **`setWindowSize`** which produced one error on playback. I removed that command (or adjusted the width/height values) and all subsequent runs **passed**.

4) Results

- **Pass criteria met:** Hugging Face model page opened and expected header text located.
- **All commands passed** on replay after removing the window-size command.
